

# Trestle Handrail Adaptor

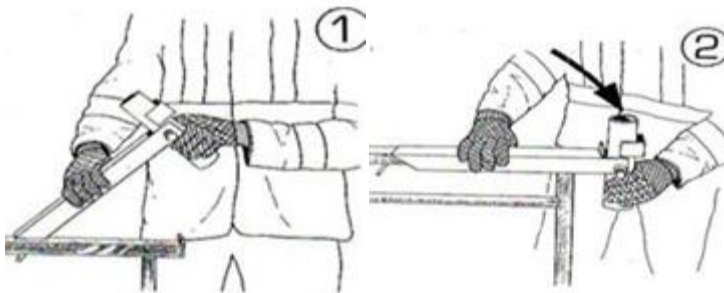

**At last.....a fast, cost effective, simple solution to fitting a handrail onto builders trestles.....**

The Handrail Bracket simply clamps onto the trestles board bearer and sits underneath the boards, the overhanging tube is designed to fit a standard scaffold tube that then enables a handrail to be built using either tube & clips or tube clamps.

To stabilise simply attach a scaffold tube to the handrail with a swivel coupler to create an outrigger.

A loading bay can be created using the "goalpost" fitting welded to each unit.

**Slide on.....**

**.....& drop into place.**
